Fixing Gen_AI_PDF_Ext...

Open request "Gen_AI_PDF_Extract_flow" in collection "Langflow_phase2_May" and fix the request so it no longer returns 422 Unprocessable Entity by validating [URL required headers, and request body]

Todos (4/4)

- Open target request from the collection
- Inspect request and 422 error details
- Fix URL, headers, and body fields
- Re-run request and confirm success

or missing API key

So the request no longer fails because of URL/query/body validation. The remaining blocker is authentication: the x-api-key value being sent is invalid or missing.

Next useful step is to update the API key used by Gen_AI_PDF_Extract_flow and resend it. I can also help inspect where that header value is sourced from in your workspace and align it with the correct key.

Describe what you need. Press @ for context, / for Skills.
