Instructions

[STRICT] Generate a test strategy document for a cloud migration project of a banking based application

[MANDATORY] Ask me 5 valid multiple choice questions one by one

[STRICTLY] ONCE AFTER ANSWERING THE FIRST QUESTION Go with next question

[CRITICAL] Stick to the output format as downloadable package

Question 1 of 5

Which cloud platform is targeted for the banking application migration?

- A. AWS
- B. Azure
- C. Google Cloud Platform (GCP)
- D. Hybrid / Multi-Cloud

D

Question 2 of 5

What is the primary migration approach planned for the banking application?

- A. Rehosting (Lift and Shift)
- B. Replatforming
- C. Refactoring / Modernization
- D. Hybrid Migration Approach

B

Question 3 of 5

Which testing type should receive the highest priority in the cloud migration strategy?

- A. Functional Testing
- B. Security & Compliance Testing
- C. Performance & Scalability Testing
- D. Disaster Recovery & Failover Testing

A

Question 4 of 5

Which deployment model is planned for the migrated banking application?

- A. Kubernetes / Containerized Deployment
- B. VM-Based Deployment
- C. Serverless Architecture
- D. Mixed Deployment Model

C

Question 5 of 5

Which test management and defect tracking tool should be referenced in the strategy document?

- A. JIRA + Xray
- B. Azure DevOps
- C. HP ALM / QC
- D. No Preference

A

The cloud migration test strategy package for the banking application has been generated based on your inputs:

- Cloud Platform: Hybrid / Multi-Cloud
- Migration Approach: Replatforming
- Testing Priority: Functional Testing
- Deployment Model: Serverless Architecture
- Test Management Tool: JIRA + Xray

Included in the package:

- Detailed Test Strategy Document
- Risk Assessment
- Functional Testing Focus Areas
- Automation Strategy
- Cloud Migration Validation Approach
- Reporting & Governance Model
- Entry / Exit Criteria
- Roles & Responsibilities
